Boom Lift License St Catharines

Boom Lift License St Catharines - To be able to operate an aerial boom lift, operators should be certified through training that can be attained utilizing both classroom sessions and practical training and by obtaining a boom lift license. Instruction must be given with respect to the kind of aerial lift that will be used on the job. A License is needed for anyone who operates or works on an aerial boom lift.

Vehicle-mounted aerial devices comprise the following work vehicles: aerial ladders, extensible boom platforms, vertical towers, articulating boom platforms, and any combination of these types.

There are several basic safety rules which apply to all boom lifts. Worker safety while in the basket is a top priority. Workers should wear a body harness and lanyard connected to the boom or basket. Never tie off to an adjacent pole, structure, or equipment. Personnel should stand on the basket floor, and never climb or sit on the edge of the basket. The load limits of the manufacturer must be adhered to.

Aerial lift operators should be authorized to use the machinery. The operator has to know all the aspects of the device and should have access to the manufacturers guidebook that should be kept within the lift. Operators are responsible for ensuring that safety measures are followed in the operation of the lift. A daily test of lift controls must be performed. Set brakes and position outriggers (if they are utilized) on a stable surface or on pads. When working on a slope, utilize wheel chocks.

Never move an aerial lift truck with an elevated boom while workers are within the basket. Articulating boom and extensible boom platforms utilized as personnel carriers should have plainly marked, accessible, upper controls. Except for in emergency cases, lower controls should not be utilized to override upper controls unless the individual inside the lift gives permission.

While working from an aerial lift, do not wear tree or pole climbers.

Do not alter the insulated portion of the aerial lift.

Make certain that the booms are carefully inspected, that the equipment is properly cradled and the outriggers are in the stowed position before moving.

When operating a boom lift next to power lines, make sure that the lines are di-electrically tested based on local regulations.
