

Aerial Lift Train the Trainer St Catharines

Aerial Lift Train the Trainer St Catharines - The Aerial Lifts Train the Trainer Certification Program teaches trainers how to effectively train operators in safe industrial mobile machine operation. Trainers are provided with in-depth instruction on aerial lift machinery. The program is offered on an open enrollment basis and delivered at selected training places. Before the certification, trainers are evaluated and graded on their knowledge and demonstrated skills.

The Aerial Lifts Train the Trainer Certification Program emphasizes practical learning. As the best training provider within the industry, we offer the best hands-on training possible through opportunities to practice concepts and techniques learned within the classroom. Together with hands-on experience, trainers develop general understanding of instructional methods and machinery theory, field and classroom communication skills, and ability to efficiently train and assess operators. Trainers will gain an understanding of what traits make a successful trainer.

The Aerial Lift Train the Trainer Certification Program teaches the instructional techniques involved in communicating concepts in a classroom and/or field situation. Knowledge needs a training component to be efficient in workplace environments. There are three aspects of machine operation that the trainer should learn how to convey to operators: what to carry out; how to do it; and why it must be done.

The program offers up-to-date, detailed reference material in order to help trainers convey the subject matter to equipment operators. Instruction manuals contain detailed information regarding all aspects of industrial mobile machine operator training. Incorporated in the package are training aids which provide a visual reference to be able to improve the learning experience. The equipment-specific training products contain essential materials for both the operator and the trainer: videos/DVD's, overhead transparencies, safety message posters, equipment models; digital training aids and stability pyramid.
